Client Challenge

As an institution specialized in local economic development, ADETIM has the role to identify the problems which prevent the local economic growth, in order to design new plans and solutions for the local needs for social and economic development. At the same time, ADETIM has the responsibility to promote the business opportunities of the district in order to accomplish the marketing process of the district. This activity has as a main purpose to improve the competitiveness of the district in the area: the 5 West region and the DCMT Euro region.

The beginning point when developing this project is the need to develop a database of the Timis district, which to ensure the promotion and information function of the entire district and, at the same time, to create a specialized database, which to value the offers of fields and buildings from the Timis district.

This necessity was identified by ADETIM from the great demand of data and information which was felt in the activity of information, consultancy and committal of the foreign investors interested by the business opportunities of the Timis district.

Ropardo S.R.L. Solution – knowledge and document management

iDocument is a solution for knowledge and document management, which allows centralization of the information inside the organization, allowing direct access (based on access levels) to all the important information inside the organization, archived and updated. ImoTim is a module for online offers promotion, which allows the centralization of the information in a central database.

In order to customize the project management solution, as to correspond to client's needs, it was necessary to elaborate an analysis of the organization and establish the specific settings according to which the software solution could be exploited most efficiently.

Our team designed the Real Estate module, which include every aspect of the project management activity and the Workflow module, to customize each of them and integrate them in a unique solution, realizing a specific solution for iDocument.

The solution allows rapid document management, facilitates the access to knowledge and information, facilitates team work and collaborations, ensures data security, reduces time and costs for intern management.

Technologies on short

The following technologies were used:

Domino Server, Lotus Notes, HTML, Java, MySQL, Typo3, CSS, PHP

Project Management

System benefits:

- direct access
- gathered information
- permanently updated
- control
- integration
- communication
- optimization

www.adetim.ro

Nearshore Benefits:

- Quality Custom Software Development
- End User Satisfaction
- Short time to market
- Quantifiable Value
- Guaranteed performance level
- Predictable cost
- Flexibility

Results

Implementing iDocument for ADETIM meant a new experience by developing and testing the new modules of the application, but it represented, first of all, the solution needed by our partners as to develop an efficient project management and the basis for a later partnership. At this moment in time, our solution is completely integrated between the specific activities of the institution.

Project Management

The project team had four members – one from the German partner and three Ropardo S.R.L. staff.

The project was developed over 6 months and the total work volume was over 19 MM. Ropardo S.R.L. team was formed by experienced persons in project domain as well with good communication skills.

German partner insured project management at level of macro planning – mile stones – organized second level for testing of solution in Germany and as customer contact point was involved together with our technicians in planned checkpoint meetings.

The Ropardo S.R.L. team insured the study and reengineering process of the existing application and definition of requirements, defining the application architecture, software development and testing (quality assurance).

Communication by email, instant messenger and telephone had a daily frequency in the first stages, than weekly reports/discussions were scheduled. When needed face to face meetings in Sibiu or Germany were organized.

The benefits

- **direct access** to the important information inside the organization, based on access levels
- important information inside the organization is not lost, it is **gathered**
- information is permanently **updated**
- **security** - every employee has access only to a part of the information, according to a specified hierarchy
- **control** - the system allows displaying every process inside the organization
- **integration** - the product integrates 100% with MS Office suite
- the solution allows a reliable and fast **communication**
- **optimization** of the internal processes
