What for?

What eEduQuality offers is knowledge and competence, and its main customer is the society.

Where did the idea come from?

European and global standards and orientations regarding quality assurance need to be immediately applied in order to fulfill the double role of an academic institution – as education provider and service supplier, both integrated in the European space.

Quality assurance is directed towards building the university customers' and partners' confidence in its capacity and availability to satisfy their demands and expectations.

Concept

eEduQuality helps the organizations to continually extend their knowledge database through organizational learning and innovation simulation processes, and through their results, capitalization, to develop their ability to transform the available knowledge into successful actions in a wise and adequate manner.

It enables the realization of an efficacious and efficient quality management in higher education institutions in order to improve the administrative and academic environment and make it compatible with the international regulations.

While supporting equal participation to informational society for all the actors involved in the educational process, its finality consists in spreading the information from the top level of the organization.

Thus, it promotes equality of chances and trust in the force of individual synergies, in the development, integration and consolidation of a research network in the area of knowledge-based systems, with an emphasis on the quality management in higher education and the network integration in the specific platform at a European level.

Partners

Benefits

- Reduction of technical and performance gap between higher education providers at a national level and the international actors.
- Automatic extraction of quality indicators from university's database, analysis of individual indicators' weight, online corrections of the deviations from the benchmark quality level, transition from formal, quantitative indicators to qualitative ones, semi-automatic tutorial.
- Equal participation to information society for all the actors involved in the educational process: students, teachers, administrative staff, local communities, governmental organizations and NGOs.
- Generating consistent trust in educational service providers' capacity and performance on the Romanian and European higher education market on a medium and long term, in the context of competitiveness increase for students and resources, and of market globalization.
- Facilitation of knowledge and national and international standards application within higher education, in the area of quality management, with an emphasis on education.
- Creation of a favorable environment by crystallizing a "knowledge sharing" culture, through tacit knowledge transfer.
