What is it?

The solution addresses knowledge management and eLearning issues in the context of the eUniversity concept.

It aims at implementing the eyeKNOW software solution developed by ROPARDO (WPCS) within "Hermann Oberth" Engineering Faculty in Sibiu.
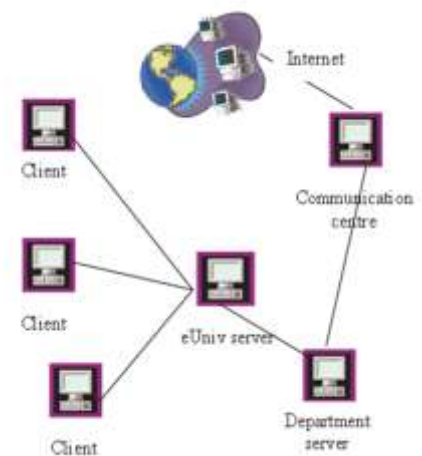

Objectives

The main scientific objectives referred to increasing performance in the university's own activities, as well as to developing university's abilities to manage knowledge.

The main technical objectives focused on: projects and documents quality improvement, promoting employees' flexibility, optimization of communication channels and methods between different departments, easy data transfer, adapting existing services to the social requirements and needs by implementing a system which would support the learning process at the university level.

Where did the idea come from?

Irrespective of the working domain, sooner or later we will confront with the necessity to work in a networking environment, because of the necessity to share resources on the Internet with partners all over the world. In this context, the capacity to attain flow of information and the ability to extract knowledge from it becomes a mandatory task.

Reorganization of the educational process is a challenge, almost a paradox because the professors are those who promote news, new technologies, new strategies and management methodologies.

Benefits

As the solution is designed to ensure an efficient document management, it allows rapid data insertion, search, update and recover, replacing the necessity of a long training even for the personnel less familiar with solution of the kind.

In order to answer every demand and every criterion described, our solution presents advantages in terms of a **simple interface**, **high speed** in finding the main commands and **usability**.

Working with a multitude of information and documents, the application must have a simple way of presenting the information, in order to be easy to use.

Future work

Further customization in view of adaptation according to existing needs will be provided, the ultimate scope being the reorganization and optimization of educational processes.

Main functionalities:

- Dashboard

- Email and group calendar

- Orga chart

- Address Book

- Document management

- Project Management

- Workflow management
