SOFTWARE OUTSOURCING PROJECT OF THE YEAR AWARD

Application Form

Organization Name	ROPARDO
Contact Person	Claudiu Zgripcea
Mobile Phone	0727 014 254
Personal Email	claudiu.zgripcea@ropardo.ro

Organization Profile

Leading IT company in Romania with a 20-year tradition in delivering offshore and nearshore solutions
Full and continuous engineering process: development and implementation of complex web and mobile applications, maintenance of software/IT systems, and full Oracle EBS and SAP consultancy
Magicians of cutting-edge technologies with hundreds of projects completed in various industries all over the world with flexible business models
Expertise proven by 10+ years partnerships with IBM, Microsoft, Oracle, 10+ years of Research and Innovation, awards from national and international institutions, and hundreds of happy customers

Project Description

Our client is a leading Dutch ICT company specialized in workforce planning and personnel scheduling software. The cutting-edge product allows optimization of the employee schedule and deployment. In addition, the often manual coordination and communication workflow with employees can also be automated through the use of optional modules for the web, via SMS messaging, and with email.

The project objective is to develop a new product – a **responsive web application for planning resources** that keeps the renowned high flexibility and user-friendliness of the software. To achieve these objectives, ROPARDO has covered the full life cycle of custom software services and mastered state-of-the-art, high-quality technology JavaScript, MVC, CSS/HTML5, as well as Microsoft technologies / MVC paradigm.

The reliable application is populated with complex modules: Authorisation , Dashboard, Managing Data, Support mechanism, Schedules, Managing scheduling data, Scheduling perspectives, Requests, Time registration, Workflow, Reports

The product was developed on a structure of two axes (development and consulting) intersected at every stage to deliver relative artifacts such as: project management, requirements (user stories, use case definitions, test case definitions), product and technology prototype, product development (clear source code, database), product QA (automated testing), product deployment.

Business Impact

The client has an existing client-server outstanding product used by thousands of end users, that has already set high-level expectations.

Ropardo provides a completely new product for award winning enterprise workforce planning solution to align it to preset expectations and current market demands: be responsive, compatible with popular devices (laptops, smartphones, tablets) regardless the operating system (Android, iOS), stay #1 user-friendly staffing app, flexible while being functional and reliable.

The highly customizable application avoids overstaffing, rightsizes workforce and, ultimately, reduces costs. Enormous amount of time with administration and invoicing can be saved since the solution can be linked to personnel and salary systems, time registration and invoice packages.

The user who carries out the planning is assisted by the software product in making the decisions. Despite the complexity of a decision, the product successfully copes with it by employing Computer Aided Scheduling.

Number of Clients / Users

Hundreds of companies in a wide variety of business sectors currently use the application: healthcare, security, public administration, transport, service providers.

Final clients' personnel range from a few hundreds to tens of thousands of employees.

Project Value

ROPARDO employed in the project multiple-level roles: project managers, software architects, software engineers, analysts, testers, together investing more than 15.000 hours of work so far.

If we talk figures, we evaluated the project value at 12% of the turnover at mid-2015.

Other Relevant Information

We like to call our product a "zero to hero" solution since it was developed from scratch, leading it through all phases of software product development life cycle:

Software Consulting

- Requirements management
- System analysis
- Risk analysis
- Process management

Software Development

- Software architecture design
- Software implementation

- Software test
- Project management

Software Services

- Software maintenance
- Software performance tuning

QA & Testing

- Functional testing
- Unit testing
- Automated testing
- Load / performance testing

Our “hero” application is based on both consulting expertise and technical excellence.

ROPARDO consulting expertise starts with a multidisciplinary team to deal with requirements, system analysis, risk analysis, architecture design, proof of concept, Agile process management.

Technical excellence is rendered by human skills employed made the difference in mastering cutting edge JavaScript responsive frameworks, libraries or Microsoft technologies. The API development, on the other hand, makes the difference to have a successful, perfectly working full system.

Our ultimate award is the client’s recognition and its satisfaction for receiving a completely innovative support for its business, not a mere model.
